PROFILE

Data Science student skilled in Python, R, Excel, and SQL, with hands-on experience building dashboards and automating analytical workflows. Committed to delivering data-driven insights that support informed business decisions and drive measurable impact.

WORK EXPERIENCE

Machine Learning Research Intern

Varun Herbal Pvt. Ltd.

Jan 2025 – Jul 2025

Remote

- Built an automated Python pipeline for data ingestion and daily reporting, reducing manual effort by 40% and ensuring consistent end-to-end data preparation.
- Identified a critical gap in crop yield visibility and developed an analytical model on 10,000+ records, enabling reliable risk classification with no manual intervention.
- Produced automated risk reports surfacing key yield factors, directly contributing to a 15% reduction in estimated production losses.

PROJECTS

Amazon Sales Dashboard – Interactive R Shiny Application

2026

- Built an interactive Shiny dashboard to analyze Amazon sales data across product ratings, prices, and categories with user-driven filters.
- Engineered a data cleaning pipeline to normalize raw CSV data and convert price strings into structured formats using dplyr and stringr.
- Delivered three core visualizations rendered dynamically with ggplot2 and plotly, offering actionable insights into pricing and product ratings.

CLUE – Stock Price Prediction & Analysis Tool

2025

- Designed CLUE, an open-source forecasting tool that automates time-series analysis for non-technical users while ensuring data privacy through local processing.
- Developed a modular pipeline combining Auto-ARIMA and XGBoost to automate data cleaning, forecasting, and PDF report generation, eliminating manual spreadsheet dependency.
- Enabled seamless data integration from Yahoo Finance and CSV files, providing users with intuitive visual insights and actionable forecasts without requiring programming skills.

Equity Forecasting Multi-Model Benchmarking & Analysis

2025

- Benchmarked forecasting approaches across 20 real stocks to identify the most robust model for equity price prediction.
- Led the full analytical lifecycle, from exploratory data analysis (EDA) to feature engineering and stakeholder presentations.
- Engineered features and evaluated 10+ models, achieving a 30%+ accuracy improvement over baseline and providing data-driven model selection recommendations.

EDUCATION

B.Sc. Digital Business & Data Science

University of Europe for Applied Sciences

2024 – 2027

Potsdam, Germany

Machine Learning Study Programme

opencampus.sh (CAU Kiel)

Ongoing

Kiel, Germany

TECHNICAL SKILLS

Python

SQL

R

PostgreSQL

Excel

PowerBI

Pandas

NumPy

XGBoost

TensorFlow

PyTorch

Machine Learning

Deep Learning

CORE COMPETENCIES

- Dashboard Development & Reporting
- Data Analysis & Visualization
- Data Pipeline & Automation
- Statistical Analysis & Forecasting
- Machine Learning & Predictive Modeling

CERTIFICATES

Machine Learning with TensorFlow

opencampus.sh

Neural Networks, Image Classification, NLP

Advanced Time Series Forecasting

opencampus.sh

LSTM, GRU, Revenue Forecasting

Scientific Machine Learning

opencampus.sh

PINNs, Neural ODEs, PyTorch

SQL: A Practical Introduction

IBM / Coursera

SQL, IBM DB2, MySQL

LANGUAGES

English (C1)

German (A2)
